Straight Drop Awning

BLADES & Shades

SECURE - Optional Stainless Steel cable guides your awning when raising or lowering allowing for a safe operation.

STYLISH - Polished Stainless Steel fittings look smart in any application be it commercial or domestic.

DURABLE - With the Protéger™ fully enclosed headbox option your fabric will be protected from the elements when retracted increasing the lifetime of your investment.

Straight Drop Awning

Aesthetically appealing and designed for a broad range of applications, a Blades & Shades **Straight Drop** System is available in Standard, **Wire Guide** or **Protéger™** options, in a choice of manual or auto operation. Whichever model you choose, the Blades & Shades **Straight Drop** System is manufactured to exceptional standards, delivering seamless operation, every time.

The **Straight Drop** Awning from Blades & Shades is a simple yet robust product suitable for most applications. Crank operation as standard with stainless steel "dog clips" which are used to secure the base rail in position. This system is great for low wind areas. In moderate wind areas consider our "**Wire Guide**" option.

Our **Wire Guide** Awning features architecturally-designed, highly polished and corrosion-resistant stainless steel fittings and a 3.2mm diameter stainless steel cabling which suspends and secures the awning, allowing it to withstand light to medium-strength winds (this prevents the bottom rail from blowing outwards and potentially causing damage or injury). Add a **Protéger** fully enclosed headbox to protect your fabric when fully retracted.
